

CORTORA

Role-Based Action and Approval Limits

Document ID	Version	Owner	Classification	Effective	Review cycle
COR-SEC-030	2.0	Operations & Technology / Security	Internal – Restricted	01 September 2026	Annual

This matrix is the authoritative source for which internal roles may perform which operational actions, and at what value thresholds an action requires additional approval. Where any other Cortora document appears to describe permissions differently, this matrix governs. It is used directly by OpsPilot's authorization checks and by human approvers reviewing a proposed action.

1. How to Read This Matrix

- 'Execute' means the role may perform the action directly without further approval, subject to the stated limit if any.
- 'Approve' means the role may authorize another employee's or OpsPilot's proposed action.
- 'Recommend only' means the role (including OpsPilot) may propose the action but cannot execute or approve it.
- A blank cell means the role has no authority over that action.

2. Refund Authorization

Role	Execute limit (per refund)	Approve limit	Notes
Support Agent	Up to €75	—	Standard categories only (Refund Policy Section 2).
Support Manager	Up to €500	Up to €1,500	May approve Support Agent goodwill exceptions.
Payments Specialist	Up to €1,500	Up to €5,000	Includes reconciliation-driven refunds.
Risk Analyst	—	Required for any refund on an account with an open risk case, regardless of amount	Sign-off required before execution by any other role.
Operations Administrator	—	Up to €15,000, with Payments Operations lead co-approval	Reserved for exceptional cases.
Technology Engineer	—	—	No refund authority regardless of system access.
OpsPilot	Recommend only	—	May never execute or approve; always subject to a human authorization check.

3. Cancellation Authorization

Role	Authority
Support Agent	May cancel PENDING orders and PROCESSING orders confirmed not yet picked.
Support Manager	May cancel any order status up to and including PROCESSING, and may approve exceptions for orders already picked but not yet shipped.
Operations Specialist	May cancel orders affected by fulfillment discrepancies or stock exceptions at any pre-shipment stage.
Operations Administrator	May cancel orders for systemic exceptions (e.g. pricing errors) across multiple accounts, under audit.
OpsPilot	Recommend only.

4. Return Decision Authorization

Role	Authority
Support Agent	May initiate a return and record the customer-stated reason code.
Operations Specialist	May record inspection outcomes (ACCEPTED, ACCEPTED_WITH_DEDUCTION, REJECTED) based on the returns centre report.
Support Manager	May override a REJECTED outcome as a documented exception.
OpsPilot	May summarise inspection outcomes already recorded; may not set or override an inspection outcome.

5. Risk and Account Actions

Role	Authority
Support Agent	May flag an interaction for risk review; may not clear or override a risk hold.
Risk Analyst	May clear, extend, or confirm abuse on a risk case; may restrict an account pending leadership decision.
Risk & Trust leadership	May approve permanent account restriction or closure.
Operations Administrator	May adjust risk scoring configuration under audit; may not personally clear individual risk cases.
OpsPilot	Recommend only; may never clear a risk hold or release a held order.

6. System Configuration and Data Access

Role	Authority
Technology Engineer	May maintain applications, APIs, and infrastructure; does not receive operational financial authority merely through system access.
Operations Administrator	May manage operational configuration (e.g. return windows, risk thresholds) subject to audit and change-control review.
All roles	May access customer information only as necessary for an active, legitimate case, per the Privacy & Data Handling Policy.

7. General Authorization Principles

- Authorization is role-based and tied to the individual employee's assigned account; it cannot be delegated informally to a colleague or shared login.
- Limits in this matrix are per single action, not cumulative across a shift; splitting a larger action into several smaller ones to stay under a limit is not permitted and should be treated as a policy violation.
- OpsPilot's authorization is always 'recommend only' for financial, cancellation, return-decision, and risk actions; it never holds execute or approve authority under any role.
- Where an action is not listed in this matrix, the default is that no role may execute it without a written exception approved by the relevant business unit lead and recorded in the case.

8. Review and Change Control

Changes to this matrix must be approved jointly by the relevant business unit lead and Technology & Data, and take effect only once the version is published and the effective date has passed. OpsPilot and connected services must reference the currently published version; historical versions are retained for audit but are not authoritative.

9. Related Documents

- Refund Policy, Cancellation Policy, Return Policy — define the substantive conditions this matrix authorizes action against.
- Fraud & Risk Policy — defines the risk actions referenced in Section 5.
- Employee Handbook & Internal Systems Guide — defines general access and approval principles.
