

CORTORA

Order Cancellation Eligibility and Handling

Document ID	Version	Owner	Classification	Effective	Review cycle
COR-PL-012	2.0	Order Operations	Internal	01 September 2026	Annual

This policy defines when a customer or employee may cancel an order, what happens to payment and fulfillment when a cancellation occurs, and when a cancellation request must instead be treated as a return. It applies to all orders placed through the Cortora marketplace.

1. Cancellation Eligibility by Order Status

Order status	Can it be cancelled?	Notes
PENDING	Yes, freely	No fulfillment activity has started; payment may still be authorizing or may not yet be captured.
PROCESSING	Conditionally	Cancellable only if the warehouse has not yet picked or packed the item; requires an Order Operations check.
SHIPPED	No	The order has left the fulfillment centre. The customer must instead request a return once the item is delivered, or a delivery-refusal process if still in transit.
DELIVERED	No	Cancellation does not apply after delivery; the applicable process is a return under the Return Policy.
CANCELLED	Already cancelled	No further action needed beyond confirming refund status if payment was captured.

2. Customer-Initiated Cancellation

A customer may request cancellation at any time before an order ships. The request should be checked against the current order status in the operational system, not against the status the customer believes applies. If the order is still PENDING or eligible PROCESSING, the cancellation should be processed immediately and any captured payment should be evaluated for refund under the Refund Policy.

If the order has already moved to SHIPPED at the time of the request, the Support Agent should inform the customer that cancellation is no longer possible and explain the return process, rather than attempting to force a cancellation against a shipped order.

3. Employee- or System-Initiated Cancellation

Cortora may cancel an order without a customer request in the following circumstances:

- The ordered item is out of stock and cannot be fulfilled within a reasonable timeframe.
- The payment authorization fails, expires, or is declined and is not corrected within the retry window defined in the Payment Operations SOP.

- A fraud or risk control flags the order for review and the review concludes the order should not be fulfilled, per the Fraud & Risk Policy.
- The delivery address is undeliverable or falls outside Cortora's serviceable regions.
- A pricing, listing, or catalogue error is identified before fulfillment and the correct price cannot be honoured.

System- or employee-initiated cancellations must include a clear, customer-facing reason and must trigger an automatic refund evaluation if any payment had already been captured.

4. Partial Order Cancellation

An order containing multiple Order Items may be partially cancelled when only some items are affected — for example, one item is out of stock while others are available. In this case, the affected Order Item is moved to CANCELLED while the remaining items continue through the normal lifecycle, and any refund is calculated only against the cancelled item's price and its proportional share of the delivery charge.

5. Payment Handling on Cancellation

Payment status at cancellation	Required action
Authorized, not captured	Release the authorization; no refund is needed because no funds were captured.
CAPTURED	Trigger a full refund evaluation under the Refund Policy for the cancelled amount.
PARTIALLY_REFUNDED	Evaluate the remaining captured balance for refund; do not assume the cancellation is already reflected in payment records.
FAILED	No refund action needed; confirm no duplicate authorization remains pending.

6. Cancellation Windows and Time Limits

- Standard items: cancellable any time before the order enters PROCESSING, and conditionally during PROCESSING as described in Section 1.
- Made-to-order or personalised items: cancellable only within 2 hours of order placement, after which production may have started.
- Bulk or business orders: governed by the separate commercial terms agreed with the business account, which take precedence over this policy.

7. What Is Not a Cancellation

A request to change the delivery address, delivery date, or product variant on an existing order is an order-modification request, not a cancellation, and should be handled under the Order Operations SOP. A request made after delivery is a return request, not a cancellation, and should be handled under the Return Policy. Employees should route the request to the correct process rather than forcing a cancellation to achieve an unrelated outcome.

8. Role of OpsPilot

OpsPilot may check the current order status, evaluate cancellation eligibility against Section 1, and identify whether a triggered refund evaluation is required. OpsPilot must retrieve the order's authoritative status before recommending a cancellation and must not cancel an order that has already shipped; in that case it should direct the case toward the return process and explain why cancellation is not available.
