

CORTORA

Delivery Windows, Carrier Investigation, and Non-Delivery Handling

Document ID	Version	Owner	Classification	Effective	Review cycle
COR-PL-014	2.0	Order Operations	Internal	01 September 2026	Annual

This policy defines Cortora's shipping methods, expected delivery windows, and the process for investigating delayed, lost, or misdelivered shipments. It applies to all orders shipped within the European Economic Area and the United Kingdom.

1. Shipping Methods and Expected Transit Times

Service level	Expected transit time	Notes
Standard	3–5 business days	Default method for most orders.
Express	1–2 business days	Available for most in-stock items at an additional charge.
Scheduled	Customer-selected delivery date	Available in select metropolitan areas.
Bulk/freight	5–10 business days	Used for large or heavy home-office items such as desks.

Transit time is measured from the point the order status transitions to SHIPPED, not from the date the order was placed. Delays in PROCESSING are governed by the Order Operations SOP, not this policy.

2. Maximum Expected Transit Time

A shipment is considered delayed once it exceeds the expected transit time for its service level by more than 2 business days, and is considered a candidate for a lost-shipment investigation once it exceeds the expected transit time by more than 7 business days for Standard and Bulk/freight, or 3 business days for Express, with no tracking movement in that period.

3. Tracking and Carrier Investigation

- Retrieve the carrier tracking record before telling a customer a shipment is delayed or lost; tracking scans, not elapsed time alone, indicate whether the shipment is moving normally.
- If tracking shows normal scan activity but has not reached the destination, provide the customer a revised estimate rather than escalating to a lost-shipment investigation.
- If tracking has stalled beyond the carrier's normal scan interval (typically 2 business days without an update), open a trace request with the carrier.
- If the carrier confirms the shipment is lost, or does not respond to the trace request within 5 business days, treat the order as non-delivered and proceed under Section 4.

4. Non-Delivery Resolution

Once a shipment is confirmed or reasonably treated as lost under Section 3, the customer should be offered either a reshipment of the same item, where stock allows, or a full refund under the Refund Policy. The choice belongs to the customer; the resolution should not be forced toward reshipment if the customer prefers a refund, or vice versa.

5. Proof of Delivery Disputes

When a carrier record shows DELIVERED but the customer states they did not receive the item, the employee should retrieve any available proof of delivery (signature, photo, or geolocation) from the carrier record. If proof of delivery is inconclusive or absent, the case should be treated as a non-delivery investigation under Section 4 rather than being denied on the basis of the DELIVERED status alone. Repeated non-delivery claims for the same delivery address across multiple orders should be flagged to Risk & Trust per the Fraud & Risk Policy.

6. Return Shipping

Return shipping labels and expected transit times for returned items follow the same service-level windows in Section 1 unless the Return Policy specifies an expedited method for a particular return reason (such as WRONG_ITEM or DAMAGED_ON_ARRIVAL).

7. Serviceable Regions and Restrictions

- Cortora ships to addresses within the European Economic Area and the United Kingdom.
- Certain product categories (e.g. large furniture, batteries above defined thresholds) may have restricted delivery regions due to carrier or regulatory constraints; these restrictions are shown at checkout and should be treated as authoritative over general regional availability.
- Freight-forwarding addresses and certain high-risk postal codes may require additional verification before shipment, per the Fraud & Risk Policy.

8. Role of OpsPilot

OpsPilot may retrieve carrier tracking data, apply the timing thresholds in Sections 2 and 3, and recommend whether a case should proceed to a lost-shipment investigation, a revised estimate, or a non-delivery resolution. OpsPilot must not tell a customer a shipment is confirmed lost before the carrier trace process in Section 3 has actually been completed or timed out.

9. Related Documents

- Order Operations SOP — governs delivery delay and fulfillment discrepancy investigations more broadly.
- Refund Policy — governs the refund resulting from confirmed non-delivery.
- Fraud & Risk Policy — governs repeated non-delivery claims and high-risk delivery addresses.
